# Graduate Outcomes Explained

The Workforce Investment Act provided the impetus for the Graduate Outcomes project to develop a system of consumer information. It is a collaborative effort among the Nebraska Department of Labor, the Coordinating Commission for Postsecondary Education, all six of Nebraska's Community Colleges, all three State Colleges and the University of Nebraska – Kearney.

*Who uses Graduate Outcomes information?*

Prospective students planning their education need information to help select a college and major. Colleges and regulatory commissions need the information to improve educational programs in the state. Workforce Investment Boards, economic developers, and policy makers need information on labor supply to help meet the needs of businesses in Nebraska.

*What does the Graduate Outcomes project tell me?*

Results from the Graduate Outcomes project give a clearer picture of recent graduates' work location, earnings, and industry employment. Here are just a few examples of questions the Graduate Outcomes project can help answer:

- In which counties are graduates employed?
- What are the demographic characteristics of graduates?
- What industries employ recent graduates?
- Which fields of study produce graduates most likely to be employed in Nebraska?
- Which fields of study produce graduates with the highest wages?
- What are some characteristics of the businesses employing these recent graduates?

The Appendix of this publication contains detailed spreadsheets for participating institutions that include the percentage of graduates working in Nebraska plus earnings by field of study and degree. It also includes industry employment by major and degree along with earnings information.

Wholesale Trade	20	\$24,245

- The highest average annual wage was paid to state college graduates with a master's degree in Superintendency and Educational System Administration. Their average annual salary was \$84,234. All graduates with this degree were found to be working in the educational services industry.
- 27.9% of all state college graduates working in retail trade had bachelor's degrees in business administration and management. The average annual salary for these degree holders was \$27,794.
- Elementary Education and Teaching graduates made up 19.7% of all state college graduates working in the educational services industry. On average, they earned \$26,192.
- The only industry that did not employ business administration and management degree holders was the Real Estate and Rental and Leasing industry.

## All State Colleges • Sector/Business Size Analysis

- The State College system has deep roots in educating educators. This heritage is most palpably reflected in the concentration of recent State College graduates in the public sector. State college students go on to become teachers and administrators in the public education system at both the state and local level year after year.
- The State College system also produces many graduates who go on to experience successful careers in Nebraska's private sector as well, but these represent a small percentage relative to recent State College graduates working in the public sector and to the same group of all employed Nebraskans.
- Recent state college graduates are more likely to be found in the employ of larger businesses and less like to work for medium and small sized employers than are employed Nebraskans in general.
- The concentration of employment of recent State College graduates in larger businesses may be due in part to their high propensity to be found employed in the Healthcare and Retail Trade Industries. Both of those industries include several of the state's larger employers.

- The largest industry for Chadron graduates was Educational Services, with 42% of graduates working in Nebraska employed in the industry.
- 70% of those employed in the Educational Services industry were female.
- 8.4% of graduates employed in Nebraska were employed in Health Care.
- 72% of those employed in Health Care were female.
- 78% of the graduates in the Health Care industry were 30 or younger.
- Of those employed in Public Administration, 70% were Social and Behavioral Sciences majors.
- Management of Companies and Enterprises was the best paying industry for Chadron graduates working in Nebraska, with those employed in the industry earning an estimated \$43,109 annually.

# Chadron State College • Sector/Business Size Analysis

- Recent Graduates of Chadron State College are more likely than recent graduates of any other State or Community College to work for the State government. Many of these recent Chadron State Graduates have careers in the Department of Health and Human Services.
- Outside of exceptionally high concentration of employment in state government, the employment patterns for recent graduates of Chadron State College mirror those of other State Colleges. Recent Chadron State College graduates are more likely than employed Nebraskans to work for local government and less likely to work for private entities.
- The distribution of employment among businesses of different sizes for all employed Nebraskans and the same distribution for recent Chadron State College graduates are nearly identical.
- The parity in the aforementioned distributions was unique among State Colleges this period. The other State Colleges reporting data to Nebraska Department of Labor LMI tended to have higher than average concentrations of employment for recent graduates among firms in the largest size category.

## Things To Know

Annualized wage records are found by taking the graduate's first quarter earnings multiplied by four. This is the same methodology used to estimate the service area earnings, using Quarterly Census of Employment and Wages data.

When there are small numbers of students in a program/major/industry, a few unusual results can dramatically affect percentages. To protect individual confidentiality, programs with fewer than four graduates will not be published. Non-publishable or unavailable data is denoted as “\*\*\*\*” or “na” throughout the publication.

Wage matches are postponed to give graduates time to be working in a career field. There is also a lag time in obtaining unemployment insurance records. In general, for people working January through March, employers have approximately April through June to report the information. The Quarterly Census of Employment and Wage information is added July through September. Past experience tells us that if the queries are run at a later date, more employment is reported, allowing for more accurate and complete data.

Not all graduates can be found. If a graduate is not found it does not necessarily mean they are unemployed; it means they were not located in the search of Nebraska's Unemployment Insurance database. Individuals who are self-employed, work in occupations not covered by Unemployment Insurance, are enrolled in other postsecondary education and are not working, or work in another state are unlikely to be found in the database. An institution's proximity to bordering states may make some students less likely to be employed in Nebraska, and therefore, not found in Nebraska's Unemployment Insurance database.

Earnings may be for full- or part-time work. Earnings reported in the database include wages, salaries, bonuses, commissions and other income designated as earnings under Nebraska Unemployment law. Wages tend to be higher in some regions than others. The wage information listed relates to all individuals found working in Nebraska and may be influenced by strong regional variation.

It is not possible to tell if graduates are employed in occupations related to their education.

The CIP Code field identifies the six digit classification of instructional program (CIP) code for each field of study.

Data pertaining to the University of Nebraska-Lincoln and University of Nebraska-Omaha was not made available to the Department of Labor for this publication.
